

ABSTRACT OF THE INVENTION

A cable lock includes a body, a cable, a tubular cover fitting around the cable and consisting of plural metal rings continually connected with one another, a fix bolt attached with one end of the cable,
5 and a removable bolt attached with the other end of the cable. The fix bolt is fixed with the body, and the removable bolt can be inserted in or pulled out of the body. The plural metal rings respectively have a round projection on one end, and a curved recess formed in the other end, allowing the metal rings may be connected with one another by
10 engagement of the round projection of one ring with the curved recess of another ring so as to form the tubular cover so that the cable can bend together with the tubular cover, enhanced in its strength to obtain the anti-theft purpose of the cable lock.
